Pramāṇa

journal of physics

Volume 26, January–June 1986

CONTENTS

Mathematical Physics

Special Stäckel electrovac spacetimes
V G Bagrov, V V Obukhov and A V Shapovalov 93–108

Perturbative evaluation of universal constants for a quartic map
G Ambika and K Babu Joseph 465–476

Spectral asymmetry of Dirac Hamiltonian in a 5-dimensional Kaluza-Klein theory *R Parthasarathy and V Srinivasan* 477–480

One parameter Lie groups admitted by time-dependent Schrödinger equation: Atoms, molecules and nucleons in harmonic oscillator field
P Rudra 481–487

Realization of a unique time evolution unitary operator in Klein Gordon theory *T S Balasubranian and Sunil K R Bhatia* 489–497

Classical Mechanics

Further examples of integrable systems in two dimensions
R S Kaushal and S C Mishra 109–115

Quantum Mechanics

Fourier transform of single eigenvalue probability density function using ensemble-averaged traces of the Hamiltonian *Nazakat Ullah* 9–14

Low energy scattering data and phase shifts
M Z Rahman Khan and M Shoeb 395–398

General Relativity and Gravitation

Velocity dependent inertial induction and secular retardation of the earth's rotation *Amitabha Ghosh* 1–8

Slow rotation of compressible viscous fluid in cosmological universe
Koijam Manihar Singh and K S Bhamra 117–127

A radiating Kerr-Newmann solution *L K Patel and Sharda S Koppar* 171–178

Physical approach to cosmological homogeneity II *Bijan Modak* 499–504

Statistical Physics

Study of Ising model on the rectangular-triangular lattice *I Bose* 15–20

On the axiomatic approach to the maximum entropy principle of inference *S N Karbelkar* 301–310

Analysis of a nonlinear stochastic model of co-operative behaviour *M C Valsakumar* 379–393

Particle Physics

Validity of the equivalent-photon approximation for the production of massive spin-1 particles *T Jayaraman, G Rajasekaran and S D Rindani* 21–41

Supersymmetric preon models with three-fermion generation *V Gupta, H S Mani and U Sarkar* 311–315

Zeros of the helicity amplitudes of $\Sigma^+ - p$ elastic scattering *S Mohanty and J K Mohapatra* 317–326

Application of current algebra and partial conservation of axial-vector current to kaon-proton interactions *K Krishna Murthy, M L P Rao and Prathibha Nuthakki* 399–407

Nuclear Physics

Polarization parameters in systems with spin-spin interactions *K S Mallesh and G Ramachandran* 43–53

Correlation between fractional independent yields and neutron-to-proton ratio of fission products in low energy fission *A Goswami, B K Srivastava, Alok Srivastava, S B Manohar, Satya Prakash and M V Ramaniah* 179–189

Differential incoherent scattering of 279·2 keV photons by Zr, Sn, Ta, Pb and U *G K Raju, K Venkataramaniah, M S Prasad, K Narasimhamurty and V A Narasimhamurthy* 327–335

Inelastic scattering of pions on ^{7}Li *S B Patangi and G Ramachandran* 337–353

Stochastic model of nuclear levelwidth *N Rudra and P Rudra* 409–417

Experimental Techniques and Instrumentation

Growth of single crystals of copper and their thermal profile estimation *S K Khanna, M Sekar, A Michael David, K Govinda Rajan and P Bhaskar Rao* 151–159

Fabrication of lithium-drifted silicon detectors by constant temperature method *R P Sharma and A S Divatia* 191–203

On the response of LR-115 plastic track detector to $^{20}_{10}$Ne-ion
S M Farid 419–425

Atomic and Molecular Physics

Theoretical calculations of the energies of the K_α satellite and hypersatellite lines of magnesium *Lakshmi Natarajan, A V Tankhiwale and C Mande* 55–60

Interpretation of predissociation in the $V' = 3$ level of $B^3\Pi_{0+}$ state of $I^{35}Cl$ and $I^{37}Cl$ *Sharada Itagi and Mahjabeen Fatima Siddiqui* 129–135

Interaction of electromagnetic field with the OH radical: A non-perturbative approach *Bhupat Sharma and Man Mohan* 427–433

Photoaddition of water to uracil: A model study of loss of absorbance by pyrimidine adducts using geometry optimization of ground and excited states *P C Mishra and R D Tewari* 505–511

Spectroscopy

Enhancement of spectral intensities of mercury triplet lines in longitudinal magnetic field *S N Sen and S K Sadhya* 205–213

Solid State Physics

Non-ohmic conduction and electrical switching under pressure of the charge transfer complex *o*-tolidine iodine
Hemamalini Naik and S V Subramanyam 61–66

Unified study and transport properties of simple metals
B Dutta, D Dutta and D Roy 67–72

Residual resistivity in Ni-Fe-Cr/V alloys and the two-current model
A K Gangopadhyay and A K Majumdar 73–78

High order electron paramagnetic resonance transitions of Gd^{3+} in $Pr_2Zn_3(NO_3)_{12} \cdot 24\ H_2O$ single crystal
V S Yadav, S K Yadav and R K Malhotra 79–83

Of heat capacity at homologous temperatures for metals showing h.c.p. $\rightleftharpoons$ b.c.c. transformation *P Ramachandrarao, D S Venkateswarlu and S Lele* 137–141

Electron structure of interstitial hydrogen in α-Zr
N Singh, S P Singh, S Mahajan, V K Jindal and S Prakash 143–150

Unified study of lead: Energy-dependent pseudopotential calculation
A Sarkar, D Sen and S Sengupta 231–237

Theory of two-phonon modes in layered charge-density-wave systems
S N Behera and G C Mohanty 239–261

Proton magnetic relaxation in $(TMA)_2HgBr_4$ and $(TMA)_2HgI_4$
B S Sarma and J Ramakrishna 263–268

Optical absorption and electrical conductivity of flash evaporated $CuGaTe_2$ thin films *K V Reddy and J L Annapurna* 269–276

Molecular orbital studies on the CO/Ni chemisorption system in presence of alkali additives and steps *S K Saha and B C Khanra* 361–365

Electron paramagnetic resonance study of free radical in γ-irradiated single crystal of tris(glycine)calcium(II)dibromide *P Subramanian, N Hariharan and J Sobhanadri* 367–372

Electron spin resonance and optical absorption studies on copper-doped lithium hydrazinium sulphate single crystals *V Chandra Mouli and G Sivarama Sastry* 435–440

Dynamic response and frequency dependent local field correction for an electron gas system *Chayanika Shah and G Mukhopadhyay* 441–458

Structure property correlations in super-conducting Ti-Nb alloys *Y Hariharan, M P Janawadkar, T S Radhakrishnan, A L E Terrance, G A Dixit and V S Raghunathan* 513–524

Electron-phonon interactions in BCT white tin *V Ramamurthy* 525–542

Ordinary and extraordinary cyclotron waves in metals *A Pushpahasan and K S Viswanathan* 543–554

Electron paramagnetic resonance study of Mn^{2+} in kainite *P Subramanian and N Hariharan* 555–560

Crystallography

Diffraction from a quasi-crystalline chain *M C Valsakumar and Vijay Kumar* 215–221

Magnetic symmetry and transport properties in crystals *V Applanarasimham* 355–360

Liquids

Structure factor of liquid metals in one-component plasma system *K N Khanna and G Shanker* 161–170

Isochoric temperature coefficient of surface tension and S_0-parameter of quasi-spherical molecular liquids *B K Sharma* 223–230

Microscopic theory of soliton propagation in ^{4}He films *A C Biswas and C S Warke* 373–377

Ultrasonic absorption studies in some solutions of carboxylic-acids in dioxan *K Srinivasa Manja and A Srinivasa Rao* 459–464

Applied Physics

Photocurrent characteristics in Cu_2O/Pt and Cu_2O/TiO_2 photoelectrochemical cells in aqueous and nonaqueous electrolytes *K A Khan and J F Kos* 277–281

Comments

Remarks on binding energy of fermions in Newtonian gravity
C Sivaram 561

Letters

Bosonic string theories with new boundary conditions
S M Roy and Virendra Singh L85–L91

A new method for generation of quasi-periodic structures with *n* fold axes: Application to five and seven folds *V Sasisekharan* L283–L293

Fibrebundle formalism for supergravity
G Sardanashvily and O Zakharov L295–L299
